

Actuator SQM40... / SQM41...

Actuators for air and gas dampers

**SQM40...
SQM41...**

- Electromotoric actuator up to 10 Nm
- Clockwise and counterclockwise variants
- Running times from 15 and 30 seconds
- Various shaft ends available
- Electronic version with analog control input
- Internal position indication
- Drive shaft can be disengaged
- UL approval

The SQM40... / SQM41... and this Data Sheet are intended for use by OEMs which integrate the actuators in their products!

Use

The SQM40... / SQM41... actuators are suited for driving flow control valves, butterfly valves, dampers or for use on other applications that require rotary motion. Areas of application are oil and gas burners of medium to higher capacity as well as thermal process plants.

The actuators are used primarily for load-dependent control of the flow of gas, oil and combustion air:

- In connection with 3-position or modulating controllers (e.g. 4...20 mA), or
- Directly by burner controls

To avoid injury to persons, damage to property or the environment, the following warning notes must be observed!

Only qualified personnel may open, interfere with or modify the actuators!

- Read the documentation on the actuators carefully and fully. If not observed, dangerous situations might occur
- All product-related activities (mounting, settings and maintenance) must be performed by qualified and authorized personnel

Caution!

- Risk of electric shock hazard – to disconnect the actuator from power, it may be necessary to open more than one switch. Before performing maintenance work, the actuator must be disconnected from power
- The electrical connection between the conduit fittings is not made automatically. It must be established on installation site
- The connecting plate is made of plastic and does not provide earthing of the conduit fittings. **Earthing must be ensured by adequate washers and wire links**
- To provide protection against electric shock hazard, the connecting terminals must have adequate touch protection. Make certain that non-insulated connections or wires cannot be touched
- Each time work has been carried out (mounting, installation, service work, etc.), check to ensure that wiring is in an orderly state
- Fall or shock can adversely affect the safety functions. Such actuators must not be put into operation even if they do not exhibit any damage
- Static charges must be avoided since they can damage the actuator's electronic components when touched.

Recommendation: Use ESD equipment

Notes on use in North America

- Use of flexible conduit including adequate accessories is mandatory
- Use of copper wiring is mandatory

Mounting notes

- Ensure that the relevant national safety regulations and notes on standards are complied with
- In geographical areas where DIN regulations apply, the mounting and installation requirements of VDE must be satisfied, especially DIN / VDE 0100, 0550 and DIN / VDE 0722
- Make certain that the actuator is not exposed to direct solar radiation
- Required tightening torques:
 - Cover screws: 3.5 Nm
 - Connecting cover: 2 Nm

Figure: Note for direction of rotation

Installation notes

- Ensure that the electrical wiring is in compliance with national and local safety regulation
- Make certain that strain relief of the connected cables conforms to the relevant standards (e.g. as per DIN EN 60730 and DIN EN 60335)
- Ensure that spliced wires cannot get into contact with neighboring terminals. Use adequate ferrules
- Unused terminals of the SQM40... / SQM41... must be covered by dummy plugs
- When making the wiring, the AC 120 V or AC 230 V section must be strictly separated from other voltage sections, thus ensuring protection against electric shock hazard
- The mechanical coupling between actuators and controlling elements must be form-fitted

Electrical connection of the SQM40... / SQM41...

- The actuators must always be powered via a prefuse of max. 6,3 AT (as per DIN EN 60127 2 / 5)
- For the protective earth connection, the housing of all models has a marked earth terminal

Marking of the voltage ranges SQM40... / SQM41...:

Figure: Electrical connection of the SQM40... / SQM41...

Note

SELV or PELV depends on the safety class of the connected components. In the case of PELV, the relevant component is connected to protective earth.

Settings of the SQM40... / SQM41...

The mechanical setting facility for the cam switches is physically separated from the connection terminals. When the actuator is disconnected from power, the switches can be adjusted via a scale. The switching points can be changed via adjusting screws. The scale indicates the angles of the switching points.

Note

Potentiometers for adjustment of the modulation limits:

7817z10/1009

Note

Usable range for the potentiometers:

Standards and certificates

Conformity to EEC directives
- Electromagnetic compatibility EMC (immunity)
- Low-voltage directive

2004/108/EC
2006/95/EC

ISO 9001: 2010
Cert. 00739

ISO 14001: 2010
Cert. 38233

For use in US / Canada where the power supply lines require a connection facility for flexible conduit, the actuator's product no. includes type suffix «R» (see following example). These products are **UL**-listed.

Example: SQM40.264**R**10

Disposal notes

The unit contains electrical and electronic components and must not be disposed of together with domestic waste.
Local and currently valid legislation must be observed.

Mechanical design

Housing	• Housing parts made of die-cast aluminium • Covers made of impact-proof and heat-resistant plastic
Drive motor	• Stall-proof synchronous motor
Couplings	• Shaft can be disengaged from motor by coupling (pressing coupling pin «K1») • Automatic reengagement - Disengagement of drive shaft / motor by pressing coupling pin «K1»
Cam shaft drive	• Non-reactive gear
Adjustment of switching points	• With adjustable cams • Scales beside the cams indicate the angle of the switching point
Position indicator	• Internally – Scale 0...90° at the base of the cam assembly – Scale range to direction of rotation with arrow and «R» or «L» marked
Electrical connections	• RAST3,5 screw terminals are enclosed, depending on the PCB variant • RAST5 screw terminals are enclosed, depending on the PCB variant • Optional: Insulation displacement connectors • Wiring through connecting cover • Easy insertion of cables through large openings in the housing
Gear train	• Maintenance-free gearwheels and bearings
Drive shaft	• Different shaft versions available
Actuator fixing	• Mounting holes on the bottom of the housing (shaft side); compatible with all types of SQM45... / SQM48... actuators, or alternatively SQM10... / SQM20... front mounting

Note

Not all types of actuators are available ex stock. Additional versions are available on request.

Drive shafts:

Type of drive shaft	Max. torque	Shaft no.
Ø 10 mm, woodruff key as per DIN 6888	10 Nm	1
□ 9.5 mm, equivalent to drive shaft of Honeywell Mod. III	10 Nm	4
Ø 10 mm D type shaft, compatible with SQM45...	10 Nm	5
Ø 14 mm with parallel key as per DIN 6885, compatible with SQM48...	10 Nm	7

Accessories

- Woodruff key or parallel key
- Connectors depending on the PCB variant

Front cover (on request)

For making the connections for the power supply lines

- For 1/2" NPT protective sleeve
- For metric cable gland

AGA45.11

AGA45.12

Note

Connecting covers are used depending on the application. The actuators come with the covers prefitted.

Terminal kits

- For replacement
- For SQM4x.x4x.xxx
- For SQM4x.x6x.xxx and SQM4x.x7x.xxx

AGA45.4

AGA45.6

Technical Data

General unit data	Operating voltage	
	- SQM4x.xxxA1...	AC 120 V -15% / +10%
	- SQM4x.xxxA2...	AC 230 V -15% / +10%
	- SQM4x.xxxR1...	AC 120 V -15% / +10%
	- SQM4x.xxxR2...	AC 230 V -15% / +10%
	Operating frequency	50...60 Hz $\pm$ 6%
	Drive motor	Synchronous motor
	Power consumption	10 VA
	Operating angle	Adjustable between 0 and max. 90°
	Mounting position	Optional
	Degree of protection	IP66 / Nema 4
	External overload fuse	Max. 6,3 AT (slow) to DIN EN 60127/2-5
	Cable entry	2 x M16 without thread or 2 x 1/2" NPT thread
	Direction of rotation	Facing the shaft end: counterclockwise or clockwise
	Torque (Holding torque = driving torque x 50%)	5 or 10 Nm, depending on type ¹⁾ For torques refer to nominal operating conditions
	Running time	15 s and 30 s, depending on type ¹⁾
	End and auxiliary switches	
	- Type	To DIN 41636
	- Switching voltage	AC 24...250 V
	- Switching capacity	1 A , AC 250 V
	Number of end switches	2
	Number of auxiliary switches	Max. 4
	Drive shaft	Supplied as standard, not replaceable
	Weight	Approx. 2 kg

1) At 60 Hz frequency, running times are about 17 % shorter and torques lower by the same rate.

Analog inputs

General	
Linearity	<5%
Control range	0...90°
Voltage setpoint	DC 2...10 V
X1-1 (U-IN), X1-2 (GND)	
- Umin	DC 2 (0) V
- Umax	DC 10 V
Input impedance	$\geq$ 5 k Ω
Current setpoint	DC 4...20 mA
X1-3 (I-IN), X1-2 (GND)	
- Imin	DC 4 (0) mA
- Imax	DC 20 mA
Input impedance	$\leq$ 500 Ω
Impedance setpoint	0...135 Ω
X1-4, X1-5, X1-6 (GND)	
- RNominal	135 Ω $\pm$ 5%

Mains voltage terminals			Design
X2-1	Opening (I)	Input	AC 120 V / AC 230 V
X2-2	Startup in low-fire (V)	Input	AC 120 V / AC 230 V
X2-3	Position reached	Output	AC 120 V / AC 230 V max. 10 mA
X2-4	Closing / ignition (VI)	Input	AC 120 V / AC 230 V
X2-5	Controller release	Input	AC 120 V / AC 230 V
X2-6	Neutral	Input	AC 120 V / AC 230 V
Low-voltage terminals			Design
X1-1	2...10 V input	Input	Max. 10 V to X1-2
X1-2	GND	Input	
X1-3	4...20 mA input	Input	Max. 20 mA to X1-2
X1-4	0...135 Ω 1	Input	
X1-5	0...135 Ω 2	Input	
X1-6	0...135 Ω 3 (GND)	Input	

Range adjustment

Adjust the range of the analog signal to match the switch positions (min. and max. position):

1. Set cam I to the required high-fire position (e.g. 85°; position is indicated on the scale next to the cam).
2. Set cam V to the required low-fire position (e.g. 20°).
3. Preset the signal at the analog input according to the required high-fire position (e.g. 20 mA).
4. Turn the potentiometer for maximum angular rotation
 - a) clockwise, if the actuator has not yet reached its maximum angular rotation, or
 - b) counterclockwise until the actuator starts
5. Preset the signal at the analog input according to the low-fire position (e.g. 4 mA).
6. Turn the potentiometer for minimum angular rotation
 - a) counterclockwise, if the actuator has not yet reached its minimum angular rotation,
 - or
 - b) clockwise until the actuator starts

Modulation always takes place between high- and low-fire.

Also, it is possible to define a closed position or a separate ignition position by setting cam VI (independent of cam V, e.g. for defining a position higher than the low-fire position).

Max. potentiometer (high-fire)

Min. potentiometer (low-fire)
